The DNA, and its products, are useful in therapy (esp. gene therapy) and diagnosis of human diseases that involve deregulated chromatin-regulator genes having a SET domain, esp. cancer. Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set. change

Claim 1; SEQ ID NO 4184; 44pp; English.

The present invention describes a method (M1) for screening for an anticc neoplastic agent. The method involves exposing cells to a chemical agent
cc to be tested for anti-neoplastic activity, determining a change in
cc expression of at least one gene (I) of a signature gene set, where (I)
cc comprises a sequence (S) selected from 8447 sequences (given in ABL61664
cc to ABL7010), or is at least 95% identical to (S), where a change in
cc expression is indicative of anti-neoplastic activity. (I) has cytostatic
cc anti-neoplastic agent, and can be used for producing a product which is
cc anti-neoplastic agent, and can be used for producing a product which is
cc anti-neoplastic agent, and can be used for producing a product which is
cc anti-neoplastic agent, and can be used for producing a product which is
cc anti-neoplastic sent to convey the chemical structure and/or
properties of the agent. MI can be used in the treatment of cancer such
cc properties of the agent, lung, thyroid, obsophageal, ovarian, kidney,
cr prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell
cc cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous
cc treatment of cancer, squamous
cc treatment of cancer, squamous

                                                                                                                                                                                                                                                                                                                                                                                                                                        CC The invention relates to a novel method for diagnosing cancer in a CC mammal. The method comprises determining amplification of specific genes, CC given in the specification, in the genome of a mammal. The invention CC further comprises methods for: diagnosing cancer or a pre-cancerous condition in a mammal; inhibiting cancer or a pre-cancerous condition in a mammal; identifying an agent having therapeutic activity in a CC human patient; identifying an anti-neoplastic agent; determining the CC cancerous status of a cell; identifying a compound as an anti-neoplastic agent; treating cancer; monitoring the progress of cancer therapy in a CC patient; determining the likelihood of success of cancer therapy in a CC patient; producing test data with respect to the anti-neoplastic activity of a compound; and determining the progress of a treatment for cancer in CC a patient following commencement of a cancer treatment on the patient. CC The methods and compositions of the invention have cytostatic activity and may be used in gene therapy. The method is useful in diagnosing or treating cancer in a mammal. This polynucleotide sequence represents a CC gene over-expressed in a cancerous cell, used in the novel cancer in CC diagnosis method of the invention.

Diagnosing cancer in a mammal comprises determining amplification specific genes, e.g., serine/threonine kinase 6, in the genome of

Claim 3; SEQ ID NO 88; 92pp; English.

CC mammal. The method composites determining amplification of specific genes, cc given in the specification, in the genome of a mammal. The invention cc further comprises methods for: diagnosing cancer or a pre-cancerous condition in a mammal, inhibiting cancer or a pre-cancerous condition in a mammal, inhibiting cancer or a pre-cancerous condition in a comman patient; identifying an arti-neoplastic agent; determining the cancerous status of a cell; identifying a compound as an anti-neoplastic cc agent; treating cancer; monitoring the progress of cancer therapy in a compound; and determining the likelihood of success of cancer therapy in a compound; and determining the progress of cancer therapy in a compound; and determining the progress of a treatment for cancer in a patient following commencement of a cancer treatment for cancer in cc and may be used in gene therapy. The method is useful in diagnosing or treating cancer in a mammal. This polynuclectide sequence represents a cc gene over-expressed in a cancerous cell, used in the novel cancer. gene over-expressed in a cancerous cell, diagnosis method of the invention. invention relates to a novel method for diagnosing g cancer in a n of specific ge The invention cancer

The invention relates to a novel method for diagnosing cancer in a mammal. The method comprises determining amplification of specific gen given in the specification, in the genome of a mammal. The invention further comprises methods for: diagnosing cancer or a pre-cancerous condition in a mammal; inhibiting cancer or a pre-cancerous condition a mammal; identifying an agent having therapeutic activity in human patient; identifying an anti-neoplastic agent; determining the

genes,

The methods and compositions of the invention have cytostatic activity and may be used in gene therapy. The method is useful in diagnosing or treating cancer in a mammal. This polynucleotide sequence represents a gene over-expressed in a cancerous cell, used in the novel cancer diagnosis method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 2600

                                                          The invention relates to a novel method for diagnosing cancer in a camemal. The method comprises determining amplification of specific genes, complete in the specification, in the genome of a mammal. The invention comprises methods for: diagnosing cancer or a pre-cancerous condition in a mammal; inhibiting cancer or a pre-cancerous condition in a mammal; inhibiting cancer or a pre-cancerous condition in a mammal in cell; identifying an agent having therapeutic activity in a common patient; identifying an anti-neoplastic agent; determining the cancerous status of a cell; identifying a compound as an anti-neoplastic agent; treating cancer; monitoring the progress of cancer therapy in a companient; determining the likelihood of success of cancer therapy in a patient; producing test data with respect to the anti-neoplastic activity of a compound; and determining the progress of a treatment for cancer in a patient following commencement of a cancer treatment on the patient.

The methods and compositions of the invention have cytostatic activity and mamy be used in gene therapy. The method is useful in diagnosing or treating cancer in a mammal. This polynucleotide sequence represents a composition of the invention and in the novel cancer in a mammal in the invention in the novel cancer in a mammal in the invention in the novel cancer in a mammal in the invention in the novel cancer in a cancer in a cancer cancer in a cancer cancer in a cancer cancer in a cancer cancer in a cancer cancer in a cancer cancer in a cancer cancer in a cancer cancer in a cancer cancer in a cancer cancer cancer cancer cancer cancer cancer in a cancer cancer cancer in a cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer c

Early detection of soft tissue sarcoma comprises determining expression of a gene in a first soft tissue sample and a normal soft tissue sample and comparing the gene expression, also useful in treating soft tissue

WPI; 2004-441208/41

Example 2; SEQ ID NO 5458; 210pp; English.

The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression in the first soft tissue samples and comparing the presence of soft tissue sarcoma. The method of the invention has evolutionally of sarcoma, possibly via gene therapy or vaccine production. The nucleic sarcoma, possibly via gene therapy or vaccine production. The nucleic sacid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated DNA of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor. ı, 0 ü 0 Other;

                                                                                                                                                                                                                                                                                                                                                        The invention relates to 242 human STAT6-activating proteins and cDNAs encoding them (ADG10411-ADG10894) and to sequences with 95% or more homology to the STAT6-activating proteins and their encoding nucleic acids. The invention also relates to recombinant vectors and host cells comprising a STAT6-activating protein encoding nucleic acid; the recombinant production of a STAT6-activating protein; antisense oligonucleotides and ribozymes targeted to nucleic acids encoding a STAT6-activating protein; an antibody methods of screening for activators or inhibitors of STAT6-activating more proteins; drug compositions comprising a modulator of STAT6-activating proteins; drug compositions and methods of treating patients by protein activity or expression, and modulators of treating proteins, nucleic acids encoding them, and modulators of their activity or expression are useful in the diagnosis and treatment of allergic activating and allergic acids encoding them addiseases diabetes hoperlibidamia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       25-MAY-2001;

```
CC The invention relates to a method for detecting a lung cancer-associated CC transcript in a cell from a patient, comprising contacting a biological CC sample from the patient with a polynucleotide that selectively hybridises CC to a sequence that is at least 80 % identical to a gene that exhibits CC increased or decreased expression in lung cancer samples. Lung cancer-CC associated polynucleotides and polypeptides are used for identifying a CC compound that modulates a lung cancer-associated polypeptide, for CC compound that modulates a lung cancer-associated cell to treat lung cancer in a patient and for treating a mammal having lung cancer by CC cancer in a patient and for treating a mammal having lung cancer by CC contracting lung cancer, such as small cell lung cancer, non-small cell CC for treating lung cancer, such as small cell lung cancer, non-small cell CC for general bronchitis, chronic obstructive pulmonary disease, fibrosis, CC emphysema, bronchitis, chronic obstructive pulmonary fibrosis, asthma and CC bronchiectasis. The genes, polynucleotides and polypeptides are useful CC compounds that modulate lung cancer, such as antibodies. Sequences CC ABX76124-ABX76474 represent lung cancer associated polynucleotides of the compounds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                10-MAY-2001; 2001US-0290492P.

                                                                                                                                                                                                                                                                                                                                                                                                               US-10-773-302-2_COPY_1_699 (1-699)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to an inhibitory RNA (RNAi) molecule derived from a nucleic acid molecule comprising a defined nucleic acid sequences given in the specification or a sequence which hybridizes to the sequences and encodes a Notch signaling target gene or which is a degenerate as a result of the genetic code of the sequences. The methods and compositions of the present invention are useful for manipulating the phenotype of stem cells, preferably pluripotent stem cells. This sequence corresponds to one of the nucleic acid molecules of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 2576

The invention relates to nucleic acids and proteins (ADN38683-ADN40064)
CC whose expression is upregulated or downregulated in specific cancers or
CC other diseases such as angiogenic or fibrotic disorders, and to methods
CC of determining the presence or absence of a patiblogical cell in a
CC patient by detecting a nucleic acid at least 80% identical to those of
CC the invention or by detecting a polypeptide of the invention. The
CC invention also relates to expression vectors and host cells comprising a
CC polypeptide of the invention; antibodies which specifically bind a
CC polypeptide of the invention; use of such antibodies for drug targeting;
CC and methods of screening for modulators of activity or expression of the
CC polypeptides and mucleic acids. The nucleic acids, polypeptides,
CC antibodies and methods are useful for diagnosing, prognosing and treating
CC cancer and other conditions such as psoriasis, ischaemia, heart disease,
CC atheroselerosis, inflammatory diseases, autoimmine diseases, retinal
CC neovascularistaion syndromes, scarring and uterine fibroids. They may
CC also be useful in wound healing and in contraception. The present
                                   sequence represents a nucleic acid sequence of
                                                                                                                                                                                                                                                                                                                                                                               Claim 8; SEQ ID NO B75; 1385pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                 Determining the presence or absence of a pathological cell in a useful for diagnosing, prognosing or treating cancer, comprises a nucleic acid in a biological sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Mack

The invention relates to a method of classifying a breast cancer patient according to prognosis by determining the similarity between the level expression of each of five genes for which markers are listed in the specification, in a cell sample taken from the breast cancer patient control levels of expression for each respective five genes to obtain a patient similarity value. The methods are useful for classifying a breat cancer patient according to prognosis. Kits and computer program product are useful for data analysis using the diagnostic, prognostic and statistical methods of the invention. This sequence corresponds to a marker used in the method of the invention.

This invention relates to a novel human diaphanous-3 (DIAPH3) protein and the encoding polynucleotide thereof. Specifically, it refers to the use of DIAPH3 cDNA in the prognosis of breast cancer, such that the DIAPH3 CDNA in the prognosis of breast cancer drugs or for the identification of molecules with anti-cancer activity. The present invention provides antibodies that specifically bind to the DIAPH3 correction, as well as methods to identify an agent that modulates the binding of DIAPH3 to a binding partner. In particular it describes measuring the expression level of DIAPH3 using hybridization oligos and comparing this with a control expression level, where a raised expression level indicates a poor prognosis with respect to breast cancer. As such, it also provides small interfering RNA oligos that can hybridize to the DIAPH3 gene and inhibit expression thereof. The peptide and nucleic acid sequences of this invention are useful as markers to differentiate patients with a good prognosis from those with poor prognosis for breast cancer and are useful as targets for screening assays designed to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Disclosure;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New purified diaphanous-3 (DIAPH3) peptides and nucleic acids, useful targets for screening assays designed to identify inhibitors or modulators of DIAPH3 activity, which are useful for treating breast
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     19-MAY-2003;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             18-MAY-2004;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         10-MAR-2005
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    US2005054826-A1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         used for treating breast cancer. Accordingly, they can be used in gene therapy and exhibit cytostatic activity. This polynucleotide sequence a human gene marker that when expression is upregulated in a patient sample it is correlated with a poor prognosis for breast cancer, given an exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 2576 BP;

The invention relates to an agent for the prophylaxis and therapy of concer comprising a compound which inhibite the activity or expression of CC cancer comprising a compound which inhibite the activity or expression of CC EZH2 inhibitors include anti-EZH2 antibodies and EZH2 antisense nucleic cacids. The invention also relates to a kit for screening for inhibitors of EZH2 activity or expression. EZH2 is a component of a complex with CC histone methyltransferase activity which methylates histone H3 on lysine CC residues at position 9 and/or 27. It has been found to be deregulated in CC various tumours, and acts as a mediator of tumorigenesis, being able to CC reverse repression of cyclin A which in turn mediates cell cycle advancement. The agent of the invention can be used for preventing. CC treating and diagnosing cancers such as colorectal cancer, breast cancer, cancer and ovarian cancer, and can also be used in drug screening. The agent of the invention is safe and less toxic than CC prior art cancer prophylactic/therapeutic agents. The present sequence

Disclosure; SEQ ID NO 2; 102pp; Japanese.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 S
               The invention relates to an agent for the prophylaxis and therapy of cancer comprising a compound which inhibits the activity or expression of CC human EZH2 (enhancer of zeste homologue 2), resulting in apoptosis. The CC EZH2 inhibitors include anti-EZH2 antibodies and EZH2 antisense nucleic acids. The invention also relates to a kit for screening for inhibitors CC of EZH2 activity or expression. EZH2 is a component of a complex with histone methyltransferase activity which methylates histone H3 on lysine CC residues at position 9 and/or 27. It has been found to be deregulated in CC various tumours, and acts as a mediator of tumorisenesis, being able to CC various tumours, and acts as a mediator of tumorisenesis, being able to CC various tumours, and acts as a mediator of tumorisenesis, being able to CC various tumours, and creas as a mediator of tumorisenesis, being able to CC various tumours, and creas as a mediator of tumorisenesis, being able to CC various tumours, and creas as a mediator of tumorisenesis, being able to CC various tumours, and creas as a mediator of the invention can be used for preventing, treating and diagnosing cancers such as colorectal cancer, breast cancer, CC tumorisenise and less toxic than confidence in drug screening. The agent of the invention is safe and less toxic than confidence in drug screening. The agent of the invention is safe and less toxic than confidence in drug screening. The agent of the invention is safe and less toxic than confidence in the confidence in the confidence in the confidence in the confidence in the confidence in the confidence in the confidence in the confidence in the confidence in the confidence in the confidence in the confidence in the confidence in the confidence in the confidence in the confidence in the confidence in the confidence in the confidence in the confidence in the confidence in the confidence in the confidence in the confidence in the confidence in the confidence in the confidence in the confidence in the confidence in the confidence i
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; EZH2; enhancer of zeste homologue 2; chromos histone methyltransferase; histone H3; cell cycle; inhibitor; apoptosis; cancer; colorectal cancer; br lung cancer; pancreatic cancer; ovarian cancer; druprophylaxis; prevention; diagnosis; cytostatic; gen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel prophylactic and therapeutic agent of cancer, having compound its salt that inhibits activity of enhancer of zeste Drosophila home protein, useful for treating cancer such as lung cancer, breast canc
